Software Engineer with over 5 years of experience developing high-performing applications in Agile environments. Experienced in optimizing databases, enhancing security, and collaborating to deliver impactful results. Skilled at leveraging AI tools to boost development productivity.

EDUCATION

Ho Chi Minh City University of Technology (HCMUT)

B.S. in Computer Science & Engineering

GPA: 7.42/10

Sep 2014 – Nov 2019

WORK EXPERIENCE

FPT Software

Software Engineer

Mar 2025 – Present

- Contributed to the Automotive project for a US customer.
- Enhanced and optimized Python code within AWS Lambda functions.
- Improved code quality by implementing component tests.
- Migrated AWS services and REST API endpoints.
- Leveraged AI tools to improve development productivity.

TMA Solutions

Software Engineer

Mar 2019 – Mar 2025

- Contributed to the Network Performance Monitoring project for a US customer.
- Collaborated on new features, improving UX/UI, and system functionality.
- Optimized query execution times to enhance application performance.
- Troubleshoot and resolved critical customer issues.
- Identified and mitigated security vulnerabilities to prevent potential breaches.
- Managed lab servers and implemented performance systems.

MangoAds

Intern

Jun 2018 – Aug 2018

- Automated content collection and import for WordPress pages.
- Developed a web application to track keyword rankings on major search engines.
- Continuously enhanced skills through online courses.

SKILL

Languages	Python, Java, C/C++
Frameworks	Django, Spring, Bootstrap
Databases	MariaDB, SQL Server
Cloud	AWS
Tools	Git, SVN, Docker, IntelliJ, VSCode, Burp Suite
AI	Copilot, Ollama, Rasa, LangChain

PROJECT

Web Checker

Project URL: <https://github.com/thinh9e/web-checker>

Dec 2018 – Present

- Developed a Django web application to evaluate SEO scores using the MVC pattern.
- Implemented content retrieval, parsing, and link status to identify and generate scores.
- Utilized thread pool for concurrent request handling, significantly reducing response time.

Centralized Synchronization Services

Mar 2024 – Mar 2025

- Collaborated with the team to design and implement the system architecture.
- Implemented Spring Integration to manage distributed services via a message queue.
- Implemented Server-Sent Events for communication between services.
- Optimized resource utilization by applying Java virtual threads to the thread pools.

Burp Suite Automation

Aug 2021 – Jun 2023

- Developed a tool that integrates with Burp Suite through a custom proxy.
- Built with Selenium for web browser automation and Tkinter for an interactive GUI.
- Deployed the tool to enhance automated security scanning within our project workflows.

Checksum Generator

Dec 2021 – Dec 2021

- Developed a pure Python checksum generation tool to ensure data integrity.
- Implemented JSON configuration to track file status changes (add/modify/delete).
- Integrated the tool into the project, ensuring seamless operation in customer deliverables.

CERTIFICATE

AWS Essential Training for Developers

Aug 2025

LinkedIn Learning: [Show credential](#)

Learned how to build and deploy applications on AWS.

Learning How to Learn

May 2025

Coursera: [Show credential](#)

Learned how the brain learns to help master any subject.

Intermediate to Advanced Python with 10 OOP Projects

Jan 2024

Udemy: [Show credential](#)

Learned Python in OOP, Git, APIs, databases, deployment, PEP8, and more.

AWARD

AI Contest 2023

Oct 2023

TMA Solutions – DG

- Placed third in an AI contest.
- Developed an AI chatbot that seamlessly integrates with customer systems.
- Engineered to answer FAQs and interact with system services via a REST API.
